ABOUT

I am an aspiring UMW graduate with a bachelor's in Applied Physics and skills in data organization and library systems. I have five years' work experience in public and academic libraries, including both shelving systems and ILL services. I am looking for internships in research, technological librarianship, or media organization to supplement my graduate school experience this Fall.

EDUCATION

University of North Carolina at Chapel Hill — Chapel Hill, NC
M.S. in Library Science (enrolled) — *Starting August 2026*

University of Mary Washington — Fredericksburg, VA
B.S. in Applied Physics; minor in English Literature — *August 2022 - May 2026*

GPA: 3.73
Scholarships: John Cope '83 Memorial Scholarship, physics; Carrol H. and Lula A. Quenzel Memorial Scholarship, library service
Honors: Sigma Tau Delta (English and Linguistics), Sigma Pi Sigma (Physics and Astronomy)

WORK EXPERIENCE

Simpson Library and Hurley Convergence Center — University of Mary Washington
Access Services Assistant — *August 2022 - May 2026*

- Digitized, shelved, and located books and microforms via the Library of Congress call number system and Alma ExLibris.
- Communicated with and serviced library patrons at the Circulation Desk.
- Managed and organized camera and computer equipment, and kept an accurate inventory
- Troubleshot technical issues with building audiovisual systems, printers, and individual computers in various rooms.

Herndon Fortnightly Library — Herndon, VA
Page — *July 2021 - August 2022*

- Shelved and located books via the Dewey Decimal call number system.
- Processed books through the Fairfax County Public Library inter-branch holds system.

RESEARCH EXPERIENCE

Material Properties of 3D Printed Bagpipes with prof. Rebecca Calloway — *May 2024 - June 2024*

- Researched and experimented with 3D printing filaments to determine the ideal for printing pipes.
- Presented work via symposium and poster to a public audience.

Observational Astronomy Optic Imaging Research with Dr. Matthew Fleenor — *January 2024 - May 2024*

- Gathered and analyzed data using Skynet and its companion Afterglow to modify telescope images into clear compound pictures of around 30 distant celestial objects.
- Determined ideal image matching software and other settings for mosaics and overlaid captures.
- Created a poster for research display in the Jepson Science Center.
